

Mobile Theming and the Mobile Moodle App

MyMobile Theming

The MyMobile theme allows users on mobile devices to view the Moodle Portal in a condensed form that improves presentation on mobile devices. Mobile device users may switch back to the standard view if they prefer it to the MyMobile theme.

Moodle Mobile App

Although the Mobile Moodle app does not replicate everything that Moodle can do on a PC, it provides features that are most useful on a standalone app such as offline access to content and messaging.

Functions of the Moodle Mobile App:

- Download various course resources (e.g., documents, audio, video) to view offline
- Upload pictures, audio, and video to your Private Files area in Moodle
- View information about course participants
- Send a private Moodle message
- Add a private note about someone
- Reminder notifications for calendar events
- Mobile push notifications
- View forum discussions
- View your activity and course total grades in a course
- Available for free from Google Play, Apple Store, and the Windows Phone Store

Helpdesk Support

Support for the Moodle Mobile app is limited, and the Learning House Helpdesk recommends using a PC for completing course activities.
